PRESS SPACE TO START

The market is hard. What can you control?

[NOT UP TO YOU]

~~Who hires you.~~

~~Who accepts your work.~~

~~Who funds your idea.~~

[UP TO YOU]

- [ ] What you can do.
- [ ] Which problems you practise on.
- [ ] What people can see of your work.
- [ ] What you learn each time.

This talk is about the second list.

Three words, three jobs.

01

Build

Make one small thing that fixes one real problem.

02

Ship

Put it where someone else can open it, use it and check it.

03

Get picked

Make what you can do easy for people to see.

If it only runs on your laptop, it isn't shipped.

I did the work before anyone paid me to.

CLEARED

LEVEL 1

On my own

Built small apps and demos. Tried other people's products and wrote down where I got stuck.

CLEARED

LEVEL 2

SaladCloud

Docs, guides and resources that helped developers move their apps onto the cloud.

CLEARED

LEVEL 3

Mode Network

Dev tools, onboarding and AI agent integrations for builders on Mode.

NOW

LEVEL 4

Aomi Labs

Product engineering, SDKs and apps for AI agents that handle crypto money safely.

LEVEL 5

Not every attempt got me the role I wanted. Every attempt left me with something I could show.

Start with a real problem.

A real problem is one a real person has today, and you can tell when it's fixed.

01	**Apps you use daily**	Where did you get stuck?
02	**Open source**	The issues list is people writing down what's broken.
03	**Tutorials**	Follow the steps. Where they break is a problem.
04	**Hackathons**	Read how you'll be judged before you build.
05	**Bounties**	Paid tasks with a clear finish line.

Write your problem in one sentence. If nobody can check it, make it smaller.

TOO BIG

~~"Fix sign-up for every app in Nigeria."~~

Nobody can check it.

SMALL ENOUGH TO FINISH

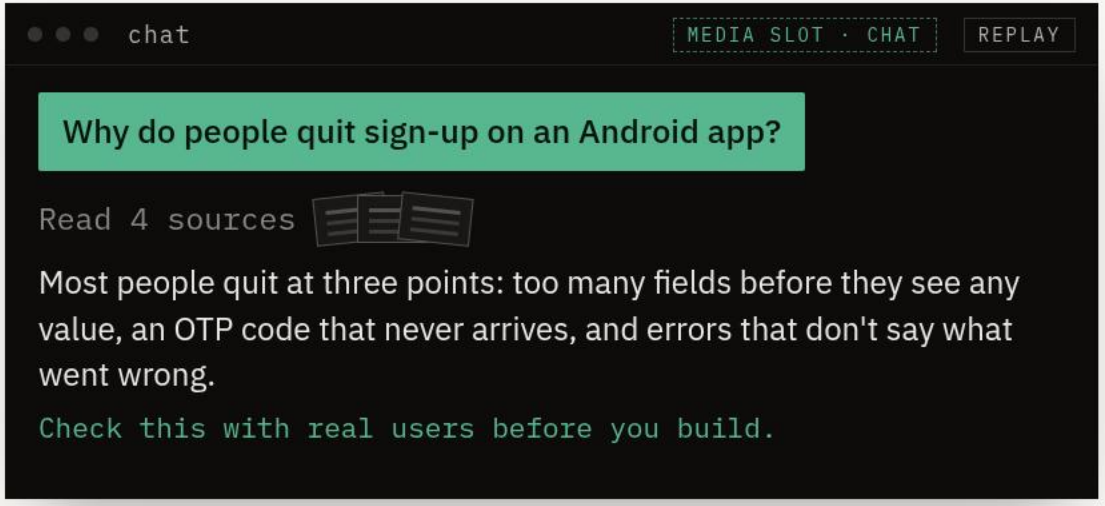

"New users can't finish this app's sign-up on Android."

You can test it today.

Pick AI tools by the job, not by the hype.

[01 · THINK AND RESEARCH]

Chat assistants answer questions and help you plan. They can be wrong, so check what they say.

ChatGPT · Claude · Gemini · Grok · Perplexity

[02 · WRITE CODE]

A coding agent is an AI that can act on your project. It opens files, changes them, runs the tests, then waits for you.

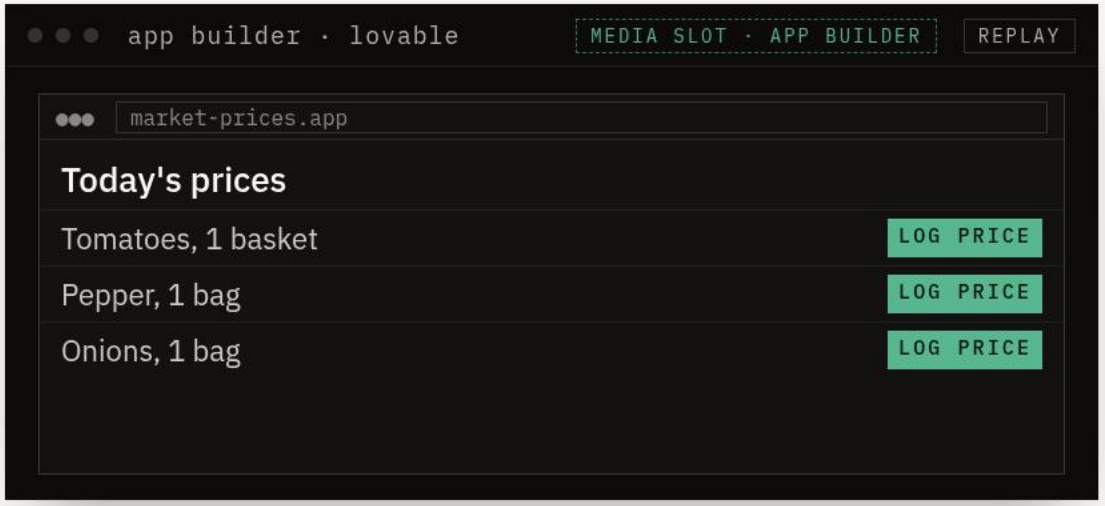

Claude Code · OpenAI Codex · Cursor · GitHub Copilot · Gemini CLI · Windsurf

Get it in front of people fast.

[03 · BUILD A FIRST VERSION]

App builders turn a plain description into an app you can click.

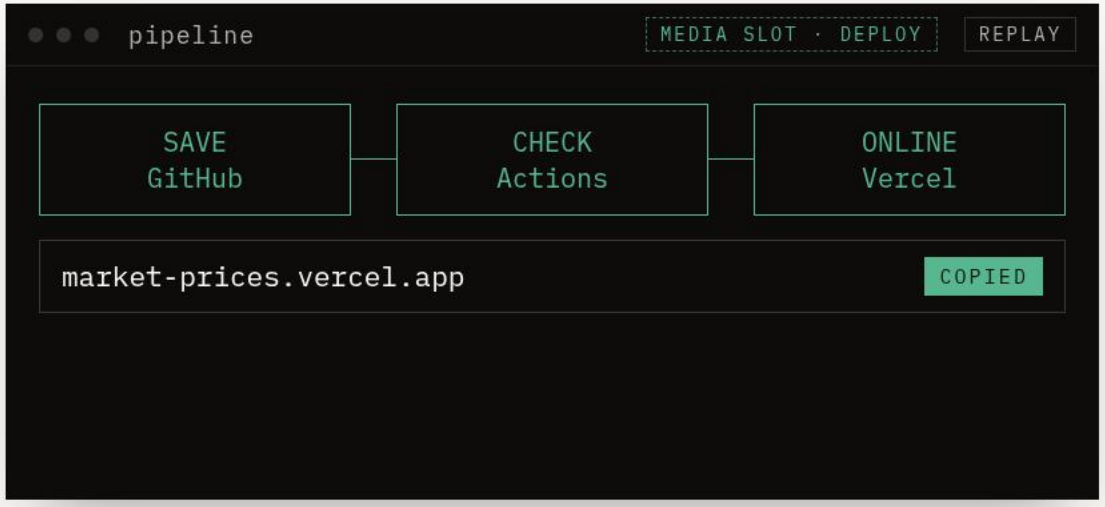

Replit · Lovable · Bolt.new · v0

Examples, not endorsements. Most have free plans.

[04 · PUT IT ONLINE]

GitHub saves every version. GitHub Actions checks your code each time you save. Vercel gives you a link anyone can open.

GitHub · GitHub Actions · Vercel

AI drafts it. You check it.

01	02	03	04	05	06
Understand	Explore	Plan	One small change	Test	Your review

AI writes the first draft.
Your name goes on the result.

- Is it correct?
- Is it safe?
- Does it do what was asked?

● AI · WAITING FOR YOU

If you can't explain a line, don't ship it.

FALLBACK · SKIP S

Demo: one small fix, four steps.

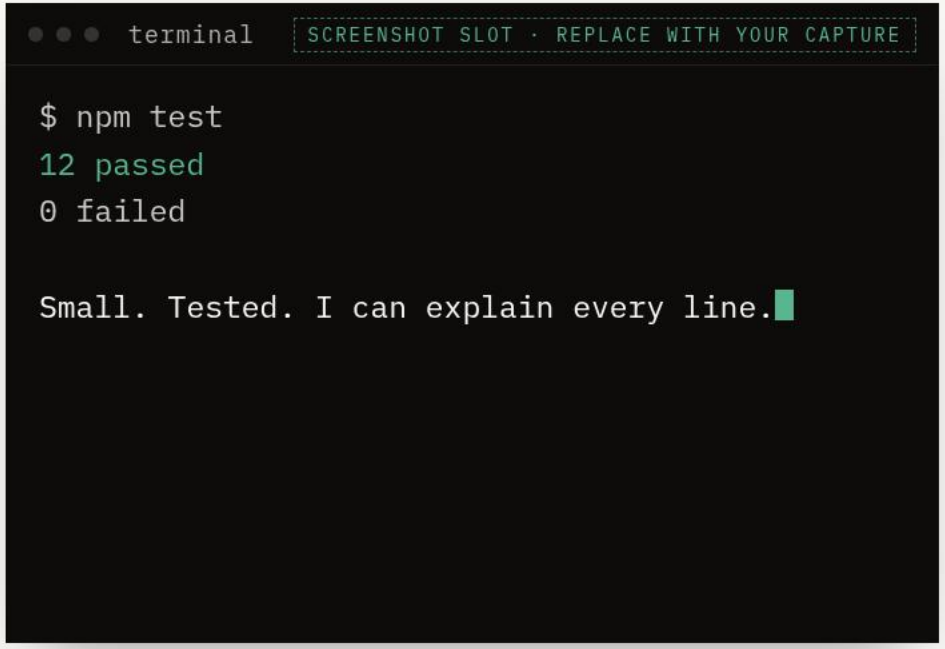

1 · The prompt — 0 files changed
Read first, ask me questions, don't touch files yet.

2 · The plan — 2 questions
Two questions back, three steps.

3 · The change — +2 -1
One line I ask "why?" about.

4 · The tests — 12 passed CONFIRM
12 passed, 0 failed.

Small. Tested. I can explain every line.

Shipped means someone else can check it.

README.md · market-prices-bot — EXAMPLE (MADE UP)

PROBLEM	Traders lose prices written on paper.
DEMO	90-second video, live link, code.
CHOICE	Used a spreadsheet so I could test it in a day.
NOT YET	English only. No login. 3 testers.
RESULT	**Didn't win. Shared it anyway.**

[BEFORE YOU SUBMIT]

- ☑ Someone else has tried it.
- ☑ A short demo video.
- ☑ Public code with a clear README.
- ☑ Your choices, explained.
- ☑ What's missing, said plainly.

Now anyone can judge it, even if it doesn't win.

Tell people what you built.

01 The problem, in one line.

02 A 30 to 60 second video.

03 The link and the code.

04 What doesn't work yet.

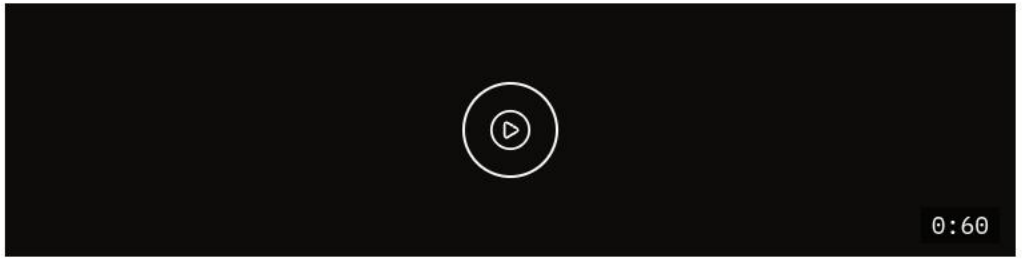

05 One clear ask.

Post it once. Then post what you changed.

You
@you

EXAMPLE (MADE UP)

Traders near me write prices on paper and lose them. I built a small tool to log them. 60-second demo below. Live link and code in the replies. English only for now. If you sell in a market, try it and tell me what's missing.

market-prices.vercel.app · github.com/you/market-prices

OPTIONAL · SKIP S

Five ways this goes wrong.

01 The problem is too big to finish.

02 You wait until it's perfect.

03 You ship code you can't explain.

04 No README, no demo, so nobody can judge it.

05 You post once and go quiet.

Pick the one you've done. Fix that one first.

You built all weekend for a hackathon.
You didn't win.

What do you have on Monday?

You didn't win the prize. You still left with six things.

They only count if people can see them. That's why you ship.

UNLOCKED A working prototype	UNLOCKED A public demo
UNLOCKED New tools you can use	UNLOCKED Notes on your choices
UNLOCKED Feedback from real people	UNLOCKED A next version to build

UNLOCKED 6 / 6 0600 XP

Build up proof people can see.

Proof is work someone else can open and check.

STAGE 07 / 07

Improve it, start the next one

A LOOP, NOT A LADDER

FINAL QUEST 48:00:00

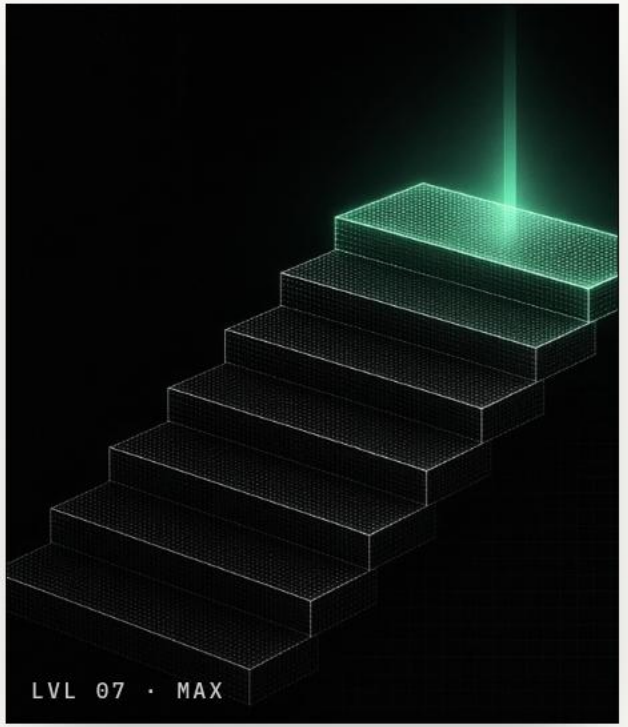

01 Pick one problem.

02 Build the smallest version that helps.

03 Publish it. Say what works and what doesn't yet.

04 Post it. Tag @0xgordian.

Getting picked means people can see what you can do. It's not a promise of a job.

Stop waiting.
Start building.

48 HOURS STARTS NOW

Tag @0xgordian with what you build.
